

UroSystem

UroDapter®

**Urological Syringe Adapter
Minimally Invasive Device for
Intravesical Instillation**

**UroDapter® single use syringe adapter
(can be used both with Luer Lock and Luer Slip syringes)**

**Replaces the conventional, urethral catheterization
Enables to inject solutions into the bladder, through the urethra**

Benefits - compared to a traditional catheter **Indications**

- No mechanical injury of the urethral mucosa
- Pain-free bladder instillation
- Less time spent on preparation
- The instilled liquid contacts the urethra, too – the only way for treating the bladder and the urethra at the same time
- Fewer post-treatment complications, significantly less chance for infections
- It penetrates the urethra only 8 mm deep
- Can be used if catheterization is contra-indicated, or impossible because of severe pain
- Cost- and time-effective

- Interstitial Cystitis/Bladder Pain Syndrome (IC/BPS)
- Recurring Urinary Tract Infections (rUTIs)
- Chemo-cystitis – following local- or systemic cytostatic drug therapy
- Radiation cystitis – following radiotherapy of pelvic malignancies

UroStill®

UroSystem

Aiding Device for Intravesical Self-Instillation
For Female Patients of Interstitial Cystitis/Bladder Pain Syndrome (IC/BPS)
Used together with UroDapter® Urological Syringe Adapter

According to the current knowledge, IC/BPS patients need a life-long treatment.

The most effective therapy is bladder instillation, but currently the patients need to visit their therapists for every treatment, which is expensive and time-consuming.

A predetermined treatment frequency often leads to under- or overtreatment.

With UroStill® female patients are able to treat themselves at home, whenever the need arises.

- It is easy to find the orifice of the urethra by using the UroStill®, which is quite difficult without the device.
- It is quick to learn how to use UroStill® – once it has happened, the patient can treat herself without external help.
- Self-instillation means fewer outpatient visits, therefore less visit cost, less travelling time.
- The self-treatment can be optimized to the patient's need, instead of the availability of the therapist.
- Used together with UroDapter®: all the benefits of the urological syringe adapter apply to UroStill®, too.
- Comes with a discreet bag that gives room to all the necessary and optional elements, so that the patient can carry the device with her easily.
